Becca,
I am forwarding your message to a colleague that might know where to look within EPA's site for the information. She will be in contact with you. I cannot say a name in specific because your request might go from one person to the next until reaching the correct one with the information. However I don't expect this to take long.

Subject: Human Health Criteria Risk Levels and FCR Rates for States

Hi Luis,

As you may know, Washington State is currently working through a rulemaking to adopt new human health criteria. As the Water Quality Standards Coordinator, I am providing support information to our lead technical staff on this issue. One task is to compile, as best as possible, a comprehensive list of existing human health criteria risk levels and FCR rates used by the different states. Short of trolling each state's WQ web page, do you know if there is a comprehensive list of this information? I searched the main EPA site and didn't see anything, but I may not have looked in the right places.

Thanks, in advance, for any information you might provide!

Sincerely,

Becca Conklin
